

Round points -Needles for stitching textiles

Normal round point "R"

Medium ball point "SUK"

Round point with slightly rounded tip "RRT"

Light ball point "SES"

Heavy ball point "SKF"

Special ball point "SKL"

Round points - Needles for stitching textiles

Normal round point "R"

Product:

Point with a slim, conical shape

The normal round point is the standard point shape. No point supplement "R" is used in the system code.

Point symbol: Seam appearance:

Applications:

- Light woven fabrics
- Coated materials, heavy woven materials, e.g. tent awnings
- Laminated materials with soft plastic or thin cardboard
- Films
- Leather/textile combinations

Acute round point "SPI"

Product:

Needle with very slim, acute point

Accurate piercing of densely woven and coated materials

Exact seam appearance

Minimization of seam puckering

Point symbol: Seam appearance:

Applications:

- Very densely woven materials, e.g. microfabrics, silk
- Thin, coated materials
- Thin, smooth materials, e.g. taffeta
- Topstitch seams in shirt stitching (shirt collars, cuffs)
- Non-covered elastomeric threads
- Manufacture of fur garments and skins

Round point with slightly rounded tip "RRT"

Product:

The round point with slightly rounded tip is less sensitive to burrs than the normal round point "R", therefore longer applicable with less damage of sewing goods.

Applications:

- Light to medium woven fabrics
- Fine to medium jeans
- Leather/textile combinations
- Technical textiles

Highlight:

Available in combination with GO design (needle with particularly wide eye). Especially suitable for multidirectional sewing, bartacking operations and embroidery to prevent thread breakage and material damage.

Round points - Needles for stitching textiles

Light ball point "SES"

Product:

The light ball point displaces woven and knitted threads, directly piercing the spaces and avoiding damage to the material.

Point symbol: Seam appearance:

Applications:

- Fine to medium knitwear
- Light denim materials
- Light, densely woven materials
- Medium to heavy woven fabric
- Laminated materials (textile/textile)

Point symbol: Seam appearance:

Threading direction

Highlight:

Particularly suitable for jersey and sportswear

Medium ball point "SUK"

Product:

Needle with medium ball point (more rounded than the light ball point "SES")

Applications:

- Medium to coarse denim materials
- Coarse knitwear
- Manufacture of corsetry

Highlight:

Best needle for stone-washed and sand-washed denim grades (particularly in thick needle sizes)

Best needle for the manufacture of corsetry (particularly in thin needle sizes)

Heavy ball point "SKF"

Point symbol: Seam appearance:

Threading direction

Product:

Needle with heavy ball point

This extremely rounded ball shape allows coarse, wide loops to be displaced by the needle without piercing the material threads.

Special ball point "SKL"

Product:

Needle with very wide, highly rounded point

This combination achieves the greatest possible displacement of material threads.

Applications:

- Fine elastic materials with covered elastomeric threads
- Coarse knitwear

Point symbol: Seam appearance:

Applications:

- Medium to coarse elastic materials with covered elastomeric threads
- Very coarse knitwear

Highlight:

The best point shape for sewing highly elastic fabrics containing elastane

The right needle size:

In addition to material and material properties, the choice of thread also determines the right needle size.
